Press Release

Magnacad Design Inc. improves native IronCAD Model and Texture Site with new additions and enhancements.

Magnacad Design Inc. has been a certified IronCAD reseller in the US regional northeast since 2000.

Commack, NY, July 1, 2009: Magnacad Design Inc. a leading provider of CAD, CAE and PLM solutions has announced it has enhanced its IronCAD native model repository site. New enhancements include:

- **On-Demand Download.** Eliminated submitting file requests and waiting period.
- **Easier Navigation.** Site has been redesigned to make finding files easier.
- **Global Icons.** Added new icons for downloading and viewing that the global community can understand easily.
- **Faster Downloads.** Files have been highly compressed for faster downloads.
- **Added IronCAD Support Imagery.** Added Bump Maps, Textures, Decals, and Gradients in addition to updated native IronCAD/Inovate catalog files (.icc)

The site was enhanced in response to overwhelming amount of submittals. “We felt it was time to reduce the burden on our staff to fulfill the influx of requests by allowing IronCAD users to simply download on-demand” stated Tom Lehnhaeuser, president, MDI. MDI was reluctant to “automate” the site for various reasons, mainly stemming from file storage and hardware requirements, however in these economic times, it made sense to make the move and utilize its staff more effectively. In addition to providing more benefits for the IronCAD community.

For Release 9 a.m. EST, July 1st, 2009

more

“We look forward to adding more IronCAD catalogs and HDRI image collections for IronCAD’s cutting edge rendering engine very soon” said Tom.
